

FlyRank AI Backend AI Engineering Internship

FL-01: AI Workflow Audit and Tool Setup

1. Introduction

This document is my submission for FL-01: AI Workflow Audit and Tool Setup in the FlyRank AI Backend AI Engineering Internship. In this task, I reviewed how I currently use AI tools in my learning work, set up the tools I will rely on during the internship, and defined what success looks like for three tasks I want to improve.

I am building my skills toward AI/ML and NLP engineering roles. Right now, my foundation includes Python, NumPy, Pandas, SQL, basic machine learning, exploratory data analysis, and general data analysis. The areas I am focusing on next are machine learning, deep learning, NLP, generative AI, LLM applications, MLOps, and building small AI products.

For this task, I set up three tools: ChatGPT, a Claude Project called “AI/ML Career Accelerator,” and the Anthropic AI Fluency Course. The rest of this report explains my workflow audit, how I configured these tools, my three target tasks, and how I plan to apply the AI Fluency principles while I learn.

2. AI Workflow Audit

Before setting up my tools, I listed the AI-related tasks I already do as part of my learning routine. The table below shows each task, how I classified it, and why it matters in my workflow.

Task	Classification	Why it is part of my workflow
Learning AI/ML Concepts	Learning	I study new AI/ML, NLP, and Generative AI concepts before trying to apply them in projects.
Python Practice	Technical Skill Development	Python is my primary programming language for data analysis, machine learning, and automation tasks.
Building ML/NLP Projects	Hands-on Practice	Projects help me apply what I learn and develop practical problem-solving skills.
Kaggle Practice & Datasets	Applied Learning	Working with datasets helps me improve model building, data preprocessing, and evaluation skills.
Researching AI Tools & Technologies	Tool Research	I explore new frameworks, libraries, and tools to understand where they fit into AI/ML workflows.
Resume & Portfolio Improvement	Career Preparation	I update my resume, GitHub, and portfolio based on completed work and newly acquired skills.
LinkedIn Networking & Content	Professional Development	I connect with professionals, follow industry trends, and share genuine learning progress.
Internship & Job Applications	Career Growth	I actively search and apply for opportunities aligned with my AI/ML career goals.
Project Documentation	Documentation	I maintain notes, READMEs, and explanations so I can understand and present my work clearly later.
Career Planning & Roadmap Tracking	Planning	I follow a structured roadmap to avoid random learning and stay focused on long-term goals.

Looking at this list helped me see that I was already using AI for several different purposes. For FL-01, I wanted my tool setup to match this real workflow instead of creating a separate process that I would not follow.

3. AI Tool Setup

I configured three tools for this internship task. Below, I explain what each one is for and how I plan to use it.

3.1 ChatGPT

I set up ChatGPT as a general helper. I use it when I need a quick explanation, a first draft of something short, or help thinking through an idea. I also use it for email drafts and rough outlines.

I do not treat ChatGPT answers as final. I read them, edit them, and check anything important before I use it in my notes, code, or submissions. For me, ChatGPT is useful for speed, not as a replacement for understanding the work myself.

3.2 Claude Project

I created a Claude Project named “AI/ML Career Accelerator.” This is the main place I want to keep my ongoing learning conversations. I chose a project setup because I work across many sessions, and I do not want to re-explain my background and goals every time.

In the project description, I wrote that I am working on the AI/ML Career Accelerator and that my aim is to build AI/ML, NLP, and generative AI skills through a structured roadmap, develop portfolio projects, and prepare for an AI/ML internship or full-time role. Claude is meant to help as a mentor, code reviewer, career coach, and interview partner when I ask for those roles.

I also added project instructions so Claude knows how I want feedback. The instructions cover teaching step by step, reviewing my work with clear strengths and weaknesses, suggesting a next action, and not letting me rely on AI so much that I cannot explain my own code. The usual session flow I wrote down is simple: I say what I need, Claude responds in that mode, and we end with one clear next step.

Screenshots of my Claude Project configuration and instructions are included later in this report as placeholders for me to paste.

3.3 Anthropic AI Fluency Course

I enrolled in the Anthropic AI Fluency Course because I want a clear way to think about using AI without becoming dependent on it. The course focuses on four ideas: Delegation, Description, Discernment, and Diligence. I am using these ideas as rules for how I work with both ChatGPT and Claude.

A screenshot of my course enrollment is included in the screenshot section.

4. Three Target Tasks and Success Definitions

From my workflow audit, I chose three tasks to improve first. These are the tasks I use often, and improving them should make the rest of my internship work cleaner.

Target Task	What I am working on	How I will know I succeeded
Prompt Engineering	Writing clearer prompts when I ask for explanations, code review, or drafting help.	My prompts include context and the format I want. I spend less time rewriting the same request. I keep notes on prompt versions for at least one repeated task.
AI Workflow Development	Following the same session pattern: state my goal, learn or build, review the result, and write one next action.	I use my Claude Project instructions regularly. Each study or build session ends with a next step I can act on. I switch tools less randomly.
LinkedIn Content Creation	Drafting short posts about real learning or project progress.	My drafts only describe work I actually did. I review them before posting. I have drafts ready when I finish something worth sharing.

5. AI/ML Career Accelerator Project

The AI/ML Career Accelerator is the Claude Project I set up for this internship workflow. It is where I plan to keep my learning and project discussions in one place.

5.1 Main Learning Goals

My main learning goals in this project are to study AI/ML topics in a sensible order, build projects I can explain myself, and keep my resume and GitHub updated only with work I have actually done. I do not want to jump between random tutorials. I want each topic to connect to practice and then to something I can show.

5.2 Skills Being Developed

These are the skill areas I am developing through the accelerator. This is my learning plan, not a list of skills I already claim to have mastered:

- Python
- Machine Learning
- NLP
- Deep Learning
- Generative AI
- LLM Applications
- FastAPI
- Docker
- MLOps

6. AI Fluency Integration

I am applying the four AI Fluency principles from the Anthropic course to my daily learning and project work. Below is how each one shows up in my own process.

6.1 Delegation

Delegation, for me, means deciding what I should do myself and what I can ask AI to help with. If I am learning a new concept, I try the core exercise myself first. I may ask AI for boilerplate or a draft later. I keep architecture choices and the main logic as my responsibility. Before I ask AI to write something, I ask myself whether I already understand the task or whether I am avoiding it.

6.2 Description

Description means being clear when I talk to AI tools. I try to include what I already know, what I am stuck on, any limits I have, and the format I need. If my prompt is vague, I rewrite it instead of accepting a vague answer.

6.3 Discernment

Discernment means checking AI output carefully. When I learn something new, I compare the explanation with documentation or another trusted source. When AI gives me code, I read it, run it, and test it before I keep it. I do not accept a suggested library or approach just because it sounds good.

6.4 Diligence

Diligence means staying responsible for the final work. If something goes on my resume or in a submission, I should be able to explain it without asking AI in the middle of an interview. If I used AI help, I should be honest about that when asked. I will not present AI-written work as if I created all of it alone.

7. Conclusion

For FL-01, I audited my AI-related tasks, set up ChatGPT, configured my Claude Project, and enrolled in the Anthropic AI Fluency Course. I also defined success for prompt engineering, AI workflow development, and LinkedIn content creation.

This setup gives me a practical way to continue my AI/ML learning during the FlyRank internship. My next step is to follow the workflow I described here: use the tools for clear purposes, apply the four Fluency principles, and keep improving the three target tasks with the success criteria I wrote above.

8. Screenshot Placeholders

I will paste the following screenshots into the boxes below to show my tool setup.

Figure 1. Claude Project Configuration

Figure 2. Claude Project Instructions

Figure 3. ChatGPT Setup

A screenshot of the Anthropic Education sign-up page. The browser address bar shows 'anthropicai.com/accounts/invite/ae87c294e4f4d865e3026ad11b01766'. The page has a light gray background. At the top, there's an 'ANTHROPIC' logo on the left and 'Anthropic Academy Courses' on the right. The main heading is 'Welcome to Anthropic Education' with a subheading 'Please complete the information below to finish signing up'. Below this, there's a form with several fields: 'First Name' (filled with 'Madiha'), 'Last Name' (filled with 'Shahid'), 'Email' (filled with 'madihashahid212@gmail.com'), 'Password' (masked with dots), 'Password (Again)' (masked with dots), 'Company (Optional)' (empty), and 'Company (Optional)' (empty). There's a checkbox for 'Optional: Email preferences' which is unchecked, with a note 'Send me helpful resources, feature updates, and best practices via email'. At the bottom of the form is a blue 'Sign Up' button. At the bottom of the page, there's a 'Data and Privacy' link. The Windows taskbar is visible at the bottom of the screen.
